PREFACE

The *NIOSH Pocket Guide to Chemical Hazards* presents information taken from the *NIOSH/OSHA Occupational Health Guidelines for Chemical Hazards*, from National Institute for Occupational Safety and Health (NIOSH) criteria documents and Current Intelligence Bulletins, and from recognized references in the fields of industrial hygiene, occupational medicine, toxicology, and analytical chemistry. The information is presented in tabular form to provide a quick, convenient source of information on general industrial hygiene practices. The information in the *Pocket Guide* includes chemical structures or formulas, identification codes, synonyms, exposure limits, chemical and physical properties, incompatibilities and reactivities, measurement methods, respirator selections, signs and symptoms of exposure, and procedures for emergency treatment.

The information assembled in the original 1978 printing of the *Pocket Guide* was the result of the Standards Completion Program, a joint effort by NIOSH and the Department of Labor to develop supplemental requirements for the approximately 380 workplace environmental exposure standards adopted by the Occupational Safety and Health Administration (OSHA) in 1971.

Listed below are changes that were made for this edition (2005-149) of the *Pocket Guide*:

- New layout for the Chemical Listing section.
- Recommendations for particulate respirators have been revised to incorporate "Part 84" terminology. See "Recommendations for Respirator Selection" on page xiv for a more thorough explanation of these changes.
- The Synonym and Trade Name Index has been expanded. This index is now called the Chemical, Synonym, and Trade Name Index (page 383).
- Some ID and Guide Numbers were changed to reflect changes made in the *2004 Emergency Response Guidebook* (http://hazmat.dot.gov/pubs/erg/gydebook.htm).
- Appendix E (page 351) has been revised. It now contains OSHA respirator requirements for 28 chemicals or hazardous substances that were identified in the preamble to the OSHA Respiratory Protection Standard (29 CFR 1910.134).
- Other minor technical changes have also been made since the February 2004 edition. (For the most current information and updates, consult the electronic version on the NIOSH Web site: http://www.cdc.gov/niosh/npg/npg.html.)

Listed below are changes made for the 3rd printing of this edition of the *Pocket Guide*:

- Changes were made to reflect the new OSHA PEL for hexavalent chromium.
- The NIOSH REL for coal mine dust was added to the coal dust entry.
- A few other minor technical changes have been made.

ACKNOWLEDGMENTS

The Education and Information Division (EID), National Institute for Occupational Safety and Health (NIOSH), has primary responsibility for the development of the *Pocket Guide*. There have been many people who have contributed to the preparation and development of this document since it was first published in 1978. I would like to express my appreciation to the following people within EID for their efforts: Vern Anderson for general guidance; Guss Hasbani (Constella Group, Inc.) for computer programming and database development that has been vital to the production of this new edition; Heinz Ahlers, Barb Dames, Charles Geraci, Richard Niemeier, David Votaw, Alan Weinrich, and Ralph Zumwalde for policy review; David Case, Laura Delaney, and Rolland Rogers for reformatting and computerization; Vanessa Becks, Anne Hamilton, and Rodger Tatken for editorial review; Clayton Doak, Eileen Kuempel, Leela Murthy, Henryka Nagy, John Palassis, Faye Rice, and David Votaw for assistance in updating and adding information; Lawrence Foster, Vicki Reuss, Lucy Schoolfield, and Ronald Schuler for data acquisition; Kent Hatfield for consultation on toxicology issues; Charlene Maloney for publication dissemination and general guidance; and Oliver F. Cobb and Associates (Carla Brooks, George Brown, Sherri Diana, and Jesse Romans) for answering requests and mailing thousands of copies of the *Pocket Guide*.

The following people, who constitute the *Pocket Guide* Editorial Board, have contributed greatly by providing guidance and review of the content and style of this new edition: Steven Ahrenholz (Division of Surveillance, Hazard Evaluations and Field Studies, DSHEFS), Roland BerryAnn (National Personal Protective Technology Laboratory, NPPTL), Joseph Bowman (Division of Applied Research and Technology, DART), Pamela Drake (Spokane Research Laboratory, SRL), Gerald Joy (Pittsburgh Research Laboratory, PRL), Alan Lunsford (DART), Nancy Nilsen (DSHEFS), Paula Fey O'Connor (DART), Carl Ornot (Office of Administrative and Management Services, OAMS), Jay Snyder (NPPTL), Sidney Soderholm (Health Effects Laboratory Division, HELD), David Sylvain (DSHEFS), Ainsley Weston (HELD), and Anthony Zimmer (DART).

In addition, the following people also have contributed greatly to the *Pocket Guide*: Mary Ellen Cassinelli (DART), Donald Dollberg (DART), and Paula Fey O'Connor (DART) for the development of the measurement methods section; Roland BerryAnn (NPPTL), Nancy Bollinger (HELD), Christopher Coffey (Division of Respiratory Disease Studies, DRDS) for the development of respirator recommendations; Laurence Reed (DART) and John Whalen (DART) for policy review; Crystal Ellison (Office of Compensation Analysis and Support, OCAS) for assistance in updating and adding information; and Henry Chan and Howard Ludwig (former *Pocket Guide* Technical Editors) for general guidance.

Also, thanks are due to all of the people who have reviewed and commented on the *Pocket Guide* during its initial development and subsequent revisions.

INTRODUCTION

The *NIOSH Pocket Guide to Chemical Hazards* provides a concise source of general industrial hygiene information for workers, employers, and occupational health professionals. The *Pocket Guide* presents key information and data in abbreviated tabular form for 677 chemicals or substance groupings commonly found in the work environment (e.g., manganese compounds, tellurium compounds, inorganic tin compounds, etc.). The industrial hygiene information found in the *Pocket Guide* assists users to recognize and control occupational chemical hazards. The chemicals or substances contained in this revision include all substances for which the National Institute for Occupational Safety and Health (NIOSH) has recommended exposure limits (RELs) and those with permissible exposure limits (PELs) as found in the Occupational Safety and Health Administration (OSHA) Occupational Safety and Health Standards (29 CFR 1910.1000 – 1052).

Background

In 1974, NIOSH (which is responsible for recommending health and safety standards) joined OSHA (whose jurisdictions include promulgation and enforcement activities) in developing a series of occupational health standards for substances with existing PELs. This joint effort was labeled the Standards Completion Program and involved the cooperative efforts of several contractors and personnel from various divisions within NIOSH and OSHA. The Standards Completion Program developed 380 substance-specific draft standards with supporting documentation that contained technical information and recommendations needed for the promulgation of new occupational health regulations. The *Pocket Guide* was developed to make the technical information in those draft standards more conveniently available to workers, employers, and occupational health professionals. The *Pocket Guide* is updated periodically to reflect new data regarding the toxicity of various substances and any changes in exposure standards or recommendations. (For the most current information and updates, consult the electronic version on the NIOSH Web site: http://www.cdc.gov/niosh/npg/npg.html.)

Data Collection and Application

The data collected for this revision were derived from a variety of sources, including NIOSH policy documents such as Criteria Documents and Current Intelligence Bulletins (CIBs), and recognized references in the fields of industrial hygiene, occupational medicine, toxicology, and analytical chemistry.

NIOSH RECOMMENDATIONS

Acting under the authority of the Occupational Safety and Health Act of 1970 (29 USC Chapter 15) and the Federal Mine Safety and Health Act of 1977 (30 USC Chapter 22), NIOSH develops and periodically revises recommended exposure limits (RELs) for hazardous substances or conditions in the workplace. NIOSH also recommends appropriate preventive measures to reduce or eliminate the adverse health and safety effects of these

hazards. To formulate these recommendations, NIOSH evaluates all known and available medical, biological, engineering, chemical, trade, and other information relevant to the hazard. These recommendations are then published and transmitted to OSHA and the Mine Safety and Health Administration (MSHA) for use in promulgating legal standards.

NIOSH recommendations are published in a variety of documents. Criteria documents recommend workplace exposure limits and appropriate preventive measures to reduce or eliminate adverse health effects and accidental injuries.

Current Intelligence Bulletins (CIBs) are issued to disseminate new scientific information about occupational hazards. A CIB may draw attention to a formerly unrecognized hazard, report new data on a known hazard, or present information on hazard control.

Alerts, Special Hazard Reviews, Occupational Hazard Assessments, and Technical Guidelines support and complement the other standard development activities of the Institute. Their purpose is to assess the safety and health problems associated with a given agent or hazard (e.g., the potential for injury or for carcinogenic, mutagenic, or teratogenic effects) and to recommend appropriate control and surveillance methods. Although these documents are not intended to supplant the more comprehensive criteria documents, they are prepared in order to assist OSHA and MSHA in the formulation of regulations.

In addition to these publications, NIOSH periodically presents testimony before various Congressional committees and at OSHA and MSHA rulemaking hearings.

Recommendations made through 1992 are available in a single compendium entitled *NIOSH Recommendations for Occupational Safety and Health: Compendium of Policy Documents and Statements* [DHHS (NIOSH) Publication No. 92-100] (http://www.cdc.gov/niosh/92-100.html). More recent recommendations are available on the NIOSH Web site (http://www.cdc.gov/niosh). Copies of the *Compendium* may be ordered from the NIOSH Publications office (800-356-4674).

HOW TO USE THIS POCKET GUIDE

The *Pocket Guide* has been designed to provide chemical-specific data to supplement general industrial hygiene knowledge. Individual tables for each chemical present this data in the Chemical Listing section (page 1). To maximize the amount of data provided in the limited space in these tables, abbreviations and codes have been used extensively. These abbreviations and codes, which have been designed to permit rapid comprehension by the regular user, are discussed for each field in these chemical tables in the following subsections.

Chemical Name

The chemical name found in the OSHA General Industry Air Contaminants Standard (29 CFR 1910.1000) is listed in the blue box in the top left portion of each chemical table. This name is referred to as the “primary name” in the Chemical, Synonym, and Trade Name Index (page 383).

Structure/Formula

The chemical structure or formula is listed in the field to the right of the chemical name in each chemical table. Carbon-carbon double bonds (-C=C-) and carbon-carbon triple bonds (-C≡C-) have been indicated where applicable.

CAS Number

This section lists the Chemical Abstracts Service (CAS) registry number. The CAS number, in the format xxx-xx-x, is unique for each chemical and allows efficient searching on computerized data bases. A page index for all CAS registry numbers listed is included at the back of the *Pocket Guide* (page 374) to help the user locate a specific substance.

RTECS Number

This section lists the NIOSH Registry of Toxic Effects of Chemical Substances (RTECS®) number, in the format ABxxxxxxx. RTECS® may be useful for obtaining additional toxicologic information on a specific substance.

RTECS® is a compendium of data extracted from the open scientific literature. On December 18, 2001, CDC's Technology Transfer Office, on behalf of NIOSH, successfully completed negotiating a "PHS Trademark Licensing Agreement" for RTECS®. This non-exclusive licensing agreement provides for the transfer and continued development of the "RTECS® database and its trademark" to MDL Information Systems, Inc. (MDL), a wholly owned subsidiary of Elsevier Science, Inc. Under this agreement, MDL will be responsible for updating, licensing, marketing, and distributing RTECS®. For more information visit the MDL Web site (http://www.mdli.com).

The RTECS® entries for chemicals listed in the *Pocket Guide* can be viewed on the NIOSH Web site (http://www.cdc.gov/niosh/npg/npg.html) or on the CD-ROM version of the *Pocket Guide* (see page iii for ordering information).

IDLH

This section lists the immediately dangerous to life or health concentrations (IDLHs). For the June 1994 Edition of the *Pocket Guide*, NIOSH reviewed and in many cases revised the IDLH values. The criteria utilized to determine the adequacy of the original IDLH values were a combination of those used during the Standards Completion Program and a newer methodology developed by NIOSH. These "interim" criteria formed a tiered approach, preferentially using acute human toxicity data, followed by acute animal inhalation toxicity data, and then by acute animal oral toxicity data to determine a preliminary updated IDLH value. When relevant acute toxicity data were insufficient or unavailable, NIOSH also considered using chronic toxicity data or an analogy to a chemically similar substance. NIOSH then compared these preliminary values with the following criteria to determine the updated IDLH value: 10% of lower explosive limit (LEL); acute animal respiratory irritation data (RD_{50}); other short-term exposure guidelines; and the *NIOSH Respirator Selection Logic* (DHHS [NIOSH] Publication No. 2005-100;

http://www.cdc.gov/niosh/docs/2005-100). The *Documentation for Immediately Dangerous to Life or Health Concentrations* (NTIS Publication Number PB-94-195047) further describes these criteria and provides information sources for both the original and revised IDLH values (http://www.cdc.gov/niosh/idlh/idlh-1.html). NIOSH currently is assessing the various uses of IDLHs, whether the criteria used to derive the IDLH values are valid, and if other information or criteria should be utilized.

The purpose for establishing an IDLH value in the Standards Completion Program was to determine the airborne concentration from which a worker could escape without injury or irreversible health effects from an IDLH exposure in the event of the failure of respiratory protection equipment. The IDLH was considered a maximum concentration above which only a highly reliable breathing apparatus providing maximum worker protection should be permitted. In determining IDLH values, NIOSH considered the ability of a worker to escape without loss of life or irreversible health effects along with certain transient effects, such as severe eye or respiratory irritation, disorientation, and incoordination, which could prevent escape. As a safety margin, IDLH values are based on effects that might occur as a consequence of a 30-minute exposure. However, the 30-minute period was NOT meant to imply that workers should stay in the work environment any longer than necessary; in fact, EVERY EFFORT SHOULD BE MADE TO EXIT IMMEDIATELY!

The *NIOSH Respirator Selection Logic* defines IDLH exposure conditions as "conditions that pose an immediate threat to life or health, or conditions that pose an immediate threat of severe exposure to contaminants, such as radioactive materials, which are likely to have adverse cumulative or delayed effects on health." The purpose of establishing an IDLH exposure concentration is to ensure that the worker can escape from a given contaminated environment in the event of failure of the respiratory protection equipment. The *Respirator Selection Logic* uses IDLH values as one of several respirator selection criteria. Under the *Respirator Selection Logic*, the most protective respirators (e.g., a self-contained breathing apparatus equipped with a full facepiece and operated in a pressure-demand or other positive-pressure mode) would be selected for firefighting, exposure to carcinogens, entry into oxygen-deficient atmospheres, in emergency situations, during entry into an atmosphere that contains a substance at a concentration greater than 2,000 times the NIOSH REL or OSHA PEL, and for entry into IDLH atmospheres. IDLH values are listed in the *Pocket Guide* for over 380 substances.

The notation "**Ca**" appears in the IDLH field for all substances that NIOSH considers potential occupational carcinogens. However, IDLH values that were originally determined in the Standards Completion Program or were subsequently revised are shown in brackets following the "**Ca**" designations. "**10%LEL**" indicates that the IDLH was based on 10% of the lower explosive limit for safety considerations even though the relevant toxicological data indicated that irreversible health effects or impairment of escape existed only at higher concentrations. "**N.D.**" indicates that an IDLH value has not been determined for that substance. Appendix F (page 361) contains an explanation of the "Effective" IDLHs used for four chloronaphthalene compounds.

Conversion Factors

This section lists factors for the conversion of ppm (parts of vapor or gas per million parts of contaminated air by volume) to mg/m^3 (milligrams of vapor or gas per cubic meter of contaminated air) at 25°C and 1 atmosphere for chemicals with exposure limits expressed in ppm.

DOT ID and Guide Number

This section lists the U.S. Department of Transportation (DOT) Identification numbers and the corresponding Guide numbers. Their format is xxxx yyy. The Identification (ID) number (xxxx) indicates that the chemical is regulated by DOT. The Guide number (yyy) refers to actions to be taken to stabilize an emergency situation; this information can be found in the *2004 Emergency Response Guidebook* (Office of Hazardous Materials Initiatives and Training [DHM-50], Research and Special Programs Administration, U.S. Department of Transportation, 400 7th Street, S.W., Washington, D.C. 20590-0001; for sale by the U.S. Government Printing Office, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954). This information is also available on the CD-ROM and Web site versions of the *Pocket Guide* (http://www.cdc.gov/niosh/npg/npg.html). A page index for all DOT ID numbers listed is provided on page 379 to help the user locate a specific substance; please note however, that many DOT numbers are **not** unique for a specific substance.

Synonyms and Trade Names

This section contains an alphabetical list of common synonyms and trade names for each chemical. A page index for all chemical names, synonyms, and trade names listed in the *Pocket Guide* is included on page 383.

Exposure Limits

The NIOSH recommended exposure limits (**REL**s) are listed first in this section. For NIOSH RELs, "**TWA**" indicates a time-weighted average concentration for up to a 10-hour workday during a 40-hour workweek. A short-term exposure limit (STEL) is designated by "**ST**" preceding the value; unless noted otherwise, the STEL is a 15-minute TWA exposure that should not be exceeded at any time during a workday. A ceiling REL is designated by "**C**" preceding the value; unless noted otherwise, the ceiling value should not be exceeded at any time. Any substance that NIOSH considers to be a potential occupational carcinogen is designated by the notation "**Ca**" (see Appendix A [page 342], which contains a brief discussion of potential occupational carcinogens).

The OSHA permissible exposure limits (**PEL**s), as found in Tables Z-1, Z-2, and Z-3 of the OSHA General Industry Air Contaminants Standard (29 CFR 1910.1000), that were effective on July 1, 1993* and which are currently enforced by OSHA are listed next.

> *In July 1992, the 11th Circuit Court of Appeals in its decision in AFL-CIO v. OSHA, 965 F.2d 962 (11th Cir., 1992) vacated more protective PELs set by OSHA in 1989 for 212 substances, moving them back to PELs

established in 1971. The appeals court also vacated new PELs for 164 substances that were not previously regulated. Enforcement of the court decision began on June 30, 1993. Although OSHA is currently enforcing exposure limits in Tables Z-1, Z-2, and Z-3 of 29 CFR 1910.1000 which were in effect before 1989, violations of the "general duty clause" as contained in Section 5(a) (1) of the Occupational Safety and Health Act may be considered when worker exposures exceed the 1989 PELs for the 164 substances that were not previously regulated. The substances for which OSHA PELs were vacated on June 30, 1993 are indicated by the symbol "†" following OSHA in this section and previous values (the PELs that were vacated) are listed in Appendix G (page 362).

TWA concentrations for OSHA **PEL**s must not be exceeded during any 8-hour workshift of a 40-hour workweek. A STEL is designated by "**ST**" preceding the value and is measured over a 15-minute period unless noted otherwise. OSHA ceiling concentrations (designated by "**C**" preceding the value) must not be exceeded during any part of the workday; if instantaneous monitoring is not feasible, the ceiling must be assessed as a 15-minute TWA exposure. In addition, there are a number of substances from Table Z-2 (e.g., beryllium, ethylene dibromide) that have PEL ceiling values that must not be exceeded except for specified excursions. For example, a "5-minute maximum peak in any 2 hours" means that a 5-minute exposure above the ceiling value, but never above the maximum peak, is allowed in any 2 hours during an 8-hour workday. Appendix B (page 344) contains a brief discussion of substances regulated as carcinogens by OSHA.

Concentrations are given in ppm, mg/m^3, mppcf (millions of particles per cubic foot of air as determined from counting an impinger sample), or $fibers/cm^3$ (fibers per cubic centimeter). The "**[skin]**" designation indicates the potential for dermal absorption; skin exposure should be prevented as necessary through the use of good work practices, gloves, coveralls, goggles, and other appropriate equipment. The "**(total)**" designation indicates that the REL or PEL listed is for "total particulate" versus the "**(resp)**" designation which refers to the "respirable fraction" of the airborne particulate.

Appendix C (page 345) contains more detailed discussions of the specific exposure limits for certain low-molecular-weight aldehydes, asbestos, various dyes (benzidine-, o-tolidine-, and o-dianisidine-based), carbon black, chloroethanes, the various chromium compounds (chromic acid and chromates, chromium(II) and chromium(III) compounds, and chromium metal), coal tar pitch volatiles, coke oven emissions, cotton dust, lead, mineral dusts, NIAX® Catalyst ESN, trichloroethylene, and tungsten carbide (cemented). Appendix D (page 350) contains a brief discussion of substances included in the *Pocket Guide* with no established RELs at this time. Appendix F (page 361) contains miscellaneous notes regarding the OSHA PEL for benzene, and Appendix G (page 362) lists the OSHA PELS that were vacated on June 30, 1993.

Measurement Methods

The section provides a source (NIOSH or OSHA) and the corresponding method number for measurement methods which can be used to determine the exposure for the chemical or

substance. Unless otherwise noted, the NIOSH methods are from the 4th edition of the *NIOSH Manual of Analytical Methods* (DHHS [NIOSH] Publication No. 94-113 [http://www.cdc.gov/niosh/nmam]) and supplements. If a different edition of the *NIOSH Manual of Analytical Methods* is cited, the appropriate edition and, where applicable, the volume number are noted [e.g., II-4 (2nd edition, volume 4)]. The OSHA methods are from the OSHA Web site (http://www.osha-slc.gov/dts/sltc/methods). "None available" means that no method is available from NIOSH or OSHA. Table 1 (page xvii) lists the editions, volumes, and supplements of the *NIOSH Manual of Analytical Methods*.

Each method listed is the recommended method for the analysis of the compound of interest. However, the method may not have been fully optimized to meet the specific sampling situation. Note that some methods are only partially evaluated and have been used in very limited sampling situations. Review the details of the method and consult with the laboratory performing the analysis regarding the applicability of the method and the need for further modifications to the method in order to adjust for the particular conditions.

Physical Description

A brief description of the appearance and odor of each substance is provided in the physical description section. Notations are made as to whether a substance can be shipped as a liquefied compressed gas or whether it has major use as a pesticide.

Chemical and Physical Properties

The following abbreviations are used for the chemical and physical properties given for each substance. "NA" indicates that a property is not applicable, and a question mark (?) indicates that it is unknown.

MW..... Molecular weight

BP.....Boiling point at 1 atmosphere, °F

Sol..... Solubility in water at 68°F*, % by weight (i.e., g/100 ml)

Fl.P..... Flash point (i.e., the temperature at which the liquid phase gives off enough vapor to flash when exposed to an external ignition source), closed cup (unless annotated "(oc)" for open cup), °F

IP..... Ionization potential, eV (electron volts)
(Ionization potentials are given as a guideline for the selection of photoionization detector lamps used in some direct-reading instruments.)

Sp.Gr..... Specific gravity at 68°F* referenced to water at 39.2°F (4°C)

RGasD…..... Relative density of gases referenced to air = 1 (indicates how many times a gas is heavier than air at the same temperature)

VP..... Vapor pressure at 68°F*, mm Hg;
"approx" indicates approximately

FRZ..... Freezing point for liquids and gases, °F

MLT..... Melting point for solids, °F

UEL.....Upper explosive (flammable) limit in air, % by volume (at room temperature*)

LEL..... Lower explosive (flammable) limit in air, % by volume (at room temperature*)

MEC.....Minimum explosive concentration, g/m^3 (when available)

*If noted after a specific entry, these properties may be reported at other temperatures.

When available, the flammability/combustibility of a substance is listed at the bottom of the chemical and physical properties section. The following OSHA criteria (29 CFR 1910.106) were used to classify flammable or combustible liquids:

Class IA flammable liquid..... Fl.P below 73°F and BP below 100°F.
Class IB flammable liquid..... Fl.P below 73°F and BP at or above 100°F.
Class IC flammable liquid..... Fl.P at or above 73°F and below 100°F.
Class II combustible liquid..... Fl.P at or above 100°F and below 140°F.
Class IIIA combustible liquid..... Fl.P at or above 140°F and below 200°F.
Class IIIB combustible liquid..... Fl.P at or above 200°F.

Personal Protection and Sanitation

This section presents a summary of recommended practices for each substance. These recommendations supplement general work practices (e.g., no eating, drinking, or smoking where chemicals are used) and should be followed if additional controls are needed after using all feasible process, equipment, and task controls. Table 2 (page xviii) explains the codes used. Each category is described as follows:

SKIN……..…… Recommends the need for personal protective clothing.
EYES…….…… Recommends the need for eye protection.
WASH SKIN…… Recommends when workers should wash the spilled chemical from the body in addition to normal washing (e.g., before eating).
REMOVE…..Advises workers when to remove clothing that has accidentally become wet or significantly contaminated.
CHANGE……..Recommends whether routine changing of clothing is needed.
PROVIDE…..…. Recommends the need for eyewash fountains and/or quick drench facilities.

Recommendations for Respirator Selection

This section provides a condensed table of allowable respirators to be used for those substances for which IDLH values have been determined, or for which NIOSH has previously provided respirator recommendations (e.g., in criteria documents or Current Intelligence Bulletins) for certain chemicals. There are, however, 186 chemicals listed in

the *Pocket Guide* for which IDLH values have yet to be determined. Since the IDLH is a critical component for completing the Respirator Selection Logic for a given chemical, the *Pocket Guide* does not provide respiratory recommendations for those 186 chemicals without IDLH values. As new or revised IDLH values are developed for those and other chemicals, NIOSH will provide appropriate respirator recommendations. (Updated information on the *Pocket Guide* can be found on the NIOSH Web site (http://www.cdc.gov/niosh/npg/npg.html) and incorporated into subsequent editions of the *Pocket Guide.* [Appendix F (page 361) contains an explanation of the "Effective" IDLHs used for four chloronaphthalene compounds.]

In 1995, NIOSH developed a new set of regulations in 42 CFR 84 (also referred to as "Part 84") for testing and certifying non-powered, air-purifying, particulate-filter respirators. The new Part 84 respirators have passed a more demanding certification test than the old respirators (e.g., dust; dust and mist; dust, mist, and fume; spray paint; pesticide) certified under 30 CFR 11 (also referred to as "Part 11"). Recommendations for non-powered, air-purifying particulate respirators have been updated from previous editions of the *Pocket Guide* to incorporate Part 84 respirators; Part 11 terminology has been removed. See Table 4 (page xxv) for information concerning the selection of N-, R-, or P-series (Part 84) particulate respirators.

In January 1998, OSHA revised its respiratory protection standard (29 CFR 1910.134). Among the provisions in the revised standard is the requirement for an end-of-service-life indicator (ESLI) or a change schedule when air-purifying respirators with chemical cartridges or canisters are used for protection against gases and vapors [29 CFR 1910.134(d)(3)(iii)]. *(Note: All respirator codes containing "**Ccr**" or "**Ov**" are covered by this requirement.)* In the *Pocket Guide*, air-purifying respirators (without ESLIs) for protection against gases and vapors are recommended only for chemicals with adequate warning properties, but now these respirators may be selected regardless of the warning properties. Respirator recommendations in the *Pocket Guide* have not been revised in this edition to reflect the OSHA requirements for ESLIs or change schedules.

Appendix A (page 342) lists the NIOSH carcinogen policy. Respirator recommendations for carcinogens in the *Pocket Guide* have not been revised to reflect this policy; these recommendations will be revised in future editions.

The first line in the entry indicates whether the "NIOSH" or the "OSHA" exposure limit is used on which to base the respirator recommendations. The more protective limit between the NIOSH REL or the OSHA PEL is always used. "NIOSH/OSHA" indicates that the limits are equivalent.

Each subsequent line lists a maximum use concentration (MUC) followed by the classes of respirators that are acceptable for use up to the MUC. Codes for the various categories of respirators, and Assigned Protection Factors (APFs) for these respirators, are listed in Table 3 (page xx). Individual respirator classes are separated by diagonal lines (/). More protective respirators may be worn. The symbol "**§**" is followed by the classes of respirators that are acceptable for emergency or planned entry into unknown concentrations or entry into IDLH conditions. "**Escape**" indicates that the respirators are to be used only

for escape purposes. For each MUC or condition, this entry lists only those respirators with the required APF and other use restrictions based on the *NIOSH Respirator Selection Logic*.

All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH/MSHA certified respirators can be found in the *NIOSH Certified Equipment List*, which is available on the NIOSH Web site (http://www.cdc.gov/niosh/npptl/topics/respirators/cel).

A complete respiratory protection program must be implemented and must fulfill all requirements of 29 CFR 1910.134. A respiratory protection program must include a written standard operating procedure covering regular training, fit-testing, fit-checking, periodic environmental monitoring, maintenance, medical monitoring, inspection, cleaning, storage and periodic program evaluation. Selection of a specific respirator within a given class of recommended respirators depends on the particular situation; this choice should be made only by a knowledgeable person. REMEMBER: Air-purifying respirators will not protect users against oxygen-deficient atmospheres, and they are not to be used in IDLH conditions. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. Additional information on the selection and use of respirators can be found in the *NIOSH Respirator Selection Logic* (DHHS [NIOSH] Publication No. 2005-100) and the *NIOSH Guide to Industrial Respiratory Protection* (DHHS [NIOSH] Publication No. 87-116), which are available on the Respirator Topic Page on the NIOSH Web site (http://www.cdc.gov/niosh/npptl/topics/respirators).

Incompatibilities and Reactivities

This section lists important hazardous incompatibilities or reactivities for each substance.

Exposure Routes, Symptoms, and Target Organs

The first row for each substance in this section lists the toxicologically important entry routes (**ER**) and whether contact with the skin or eyes is potentially hazardous. The second row lists the potential symptoms of exposure (**SY**) and whether NIOSH considers the substance a potential occupational carcinogen (**[carc]**). The third row lists target organs (**TO**) affected by exposure to the substance (for carcinogens, the types of cancer are listed in brackets). Information in this section reflects human data unless otherwise noted. Abbreviations are defined in Table 5 (page xxvi).

First Aid

This section lists emergency procedures for eye and skin contact, inhalation, and ingestion of the toxic substance. Abbreviations are defined in Table 6 (page xxviii).

Personal Protection and Sanitation Codes

Code		Definition
Skin:	Prevent skin contact	Wear appropriate personal protective clothing to prevent skin contact.
	Frostbite	Compressed gases may create low temperatures when they expand rapidly. Leaks and uses that allow rapid expansion may cause a frostbite hazard. Wear appropriate personal protective clothing to prevent the skin from becoming frozen.
	N.R	No recommendation is made specifying the need for personal protective equipment for the body.
Eyes:	Prevent eye contact	Wear appropriate eye protection to prevent eye contact.
	Frostbite	Wear appropriate eye protection to prevent eye contact with the liquid that could result in burns or tissue damage from frostbite.
	N.R.	No recommendation is made specifying the need for eye protection.
Wash skin:	When contam	The worker should immediately wash the skin when it becomes contaminated.
	Daily	The worker should wash daily at the end of each work shift, and prior to eating, drinking, smoking, etc.
	N.R.	No recommendation is made specifying the need for washing the substance from the skin (either immediately or at the end of the work shift).
Remove:	When wet or contam	Work clothing that becomes wet or significantly contaminated should be removed and replaced.
	When wet (flamm)	Work clothing that becomes wet should be immediately removed due to its flammability hazard (i.e., for liquids with a flash point <100°F).
	N.R.	No recommendation is made specifying the need for removing clothing that becomes wet or contaminated.

Table 2 (Continued)
Personal Protection and Sanitation Codes

Code		Definition
Change:	Daily	Workers whose clothing may have become contaminated should change into uncontaminated clothing before leaving the work premises.
	N.R.	No recommendation is made specifying the need for the worker to change clothing after the workshift.
Provide:	Eyewash	Eyewash fountains should be provided in areas where there is any possibility that workers could be exposed to the substances; this is irrespective of the recommendation involving the wearing of eye protection.
	Quick drench	Facilities for quickly drenching the body should be provided within the immediate work area for emergency use where there is a possibility of exposure. [**Note:** It is intended that these facilities provide a sufficient quantity or flow of water to quickly remove the substance from any body areas likely to be exposed. The actual determination of what constitutes an adequate quick drench facility depends on the specific circumstances. In certain instances, a deluge shower should be readily available, whereas in others, the availability of water from a sink or hose could be considered adequate.]
	Frostbite wash	Quick drench facilities and/or eyewash fountains should be provided within the immediate work area for emergency use where there is any possibility of exposure to liquids that are extremely cold or rapidly evaporating.
Other codes:	Liq	Liquid
	Molt	Molten
	Sol	Solid
	Soln	Solution containing the contaminant
	Vap	Vapor

Symbols, Code Components, and Codes Used for Respirator Selection

Symbol	Description
¥	At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration
§	Emergency or planned entry into unknown concentrations or IDLH conditions
*	Substance reported to cause eye irritation or damage; may require eye protection
£	Substance causes eye irritation or damage; eye protection needed
¿	Only nonoxidizable sorbents allowed (not charcoal)
†	End of service life indicator (ESLI) required
APF	Assigned protection factor

Code Component	Description
95	Particulate respirator or filter that is 95% efficient. See **Table 4** (page xxv) to select N95, R95, or P95.
99	Particulate respirator or filter that is 99% efficient. See **Table 4** (page xxv) to select N99, R99, or P99.
100	Particulate respirator or filter that is 99.97% efficient. See **Table 4** (page xxv) to select N100, R100, or P100.
Ccr	Chemical cartridge respirator
F	Full facepiece
GmF	Air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister
Papr	Powered, air-purifying respirator
Sa	Supplied-air respirator
Scba	Self-contained breathing apparatus
Ag	Acid gas cartridge or canister
Cf	Continuous flow mode
Hie	High-efficiency particulate filter
Ov	Organic vapor cartridge or canister
Pd,Pp	Pressure-demand or other positive-pressure mode
Qm	Quarter-mask respirator

Symbols, Code Components, and Codes Used for Respirator Selection

Code	APF	Description
95F	10	Any air-purifying full-facepiece respirator equipped with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
95XQ	10	Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
100F	50	Any air-purifying, full-facepiece respirator with an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
100XQ	10	Any air-purifying respirator with an N100, R100, or P100 filter (including N100, R100, and P100 filtering facepieces) except quarter-mask respirators. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
CcrFAg100	50	Any chemical cartridge respirator with a full facepiece and acid gas cartridge(s) in combination with an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
CcrFOv	50	Any air-purifying full-facepiece respirator equipped with organic vapor cartridge(s).
CcrFOv95	10	Any full-facepiece respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
CcrFOv100	50	Any air-purifying full-facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
CcrFS	50	Any air-purifying full-facepiece respirator equipped with cartridge(s) providing protection against the compound of concern.
CcrFS100	50	Any air-purifying full-facepiece respirator equipped with cartridge(s) providing protection against the compound of concern in combination with an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
CcrOv	10	Any air-purifying half-mask respirator equipped with organic vapor cartridge(s).

CcrOv95	10	Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
CcrOv100	10	Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
CcrOvAg	10	Any air-purifying half-mask respirator equipped with organic vapor and acid gas cartridge(s).
CcrS	10	Any air-purifying half-mask respirator equipped with cartridge(s) providing protection against the compound of concern.
GmFAg	50	Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister.
GmFAg100	50	Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister having an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
GmFOv	50	Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister.
GmFOv95	10	Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
GmFOv100	50	Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
GmFOvAg	50	Any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor and acid gas canister.
GmFOvAg100	50	Any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor and acid gas canister having an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
GmFS	50	Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern.

GmFS100	50	Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter. See **Table 4** (page xxv) for information on selection of N, R, or P filters.
PaprAg	25	Any powered air-purifying respirator with acid gas cartridge(s).
PaprAgHie	25	Any powered air-purifying respirator with acid gas cartridge(s) in combination with a high-efficiency particulate filter.
PaprHie	25	Any powered air-purifying respirator with a high-efficiency particulate filter.
PaprOv	25	Any powered air-purifying respirator with organic vapor cartridge(s).
PaprOvAg	25	Any powered air-purifying respirator with organic vapor and acid gas cartridge(s).
PaprOvHie	25	Any powered air-purifying respirator with an organic vapor cartridge in combination with a high-efficiency particulate filter.
PaprS	25	Any powered air-purifying respirator with cartridge(s) providing protection against the compound of concern.
PaprTHie	50	Any powered air-purifying respirator with a tight-fitting facepiece and a high-efficiency particulate filter.
PaprTOv	50	Any powered air-purifying respirator with a tight-fitting facepiece and organic vapor cartridge(s).
PaprTOvHie	50	Any powered air-purifying respirator with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter.
PaprTS	50	Any powered air-purifying respirator with a tight-fitting facepiece and cartridge(s) providing protection against the compound of concern.
Qm	5	Any quarter-mask respirator. See **Table 4** (page xxv) for information on selection of N, R, or P particulate filters.
Sa	10	Any supplied-air respirator.
Sa:Cf	25	Any supplied-air respirator operated in a continuous-flow mode.
Sa:Pd,Pp	1,000	Any supplied-air respirator operated in a pressure-demand or other positive-pressure mode.

SaF	50	Any supplied-air respirator with a full facepiece.
SaF:Pd,Pp	2,000	Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive pressure mode.
SaF:Pd,Pp:AScba	10,000	Any supplied-air respirator that has a full-facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in pressure-demand or other positive-pressure mode.
SaT:Cf	50	Any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode.
ScbaE		Any appropriate escape-type, self-contained breathing apparatus.
ScbaF	50	Any self-contained breathing apparatus with a full facepiece.
ScbaF:Pd,Pp	10,000	Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode.

Table 4
Selection of N-, R-, or P-Series Particulate Respirators

1. The selection of N-, R-, and P-series filters depends on the presence of oil particles as follows:

- If no oil particles are present in the work environment, use a filter of any series (i.e., N-, R-, or P-series).
- If oil particles (e.g., lubricants, cutting fluids, glycerine) are present, use an R- or P-series filter. **Note: N-series filters cannot be used if oil particles are present.**
- If oil particles are present and the filter is to be used for more than one work shift, use only a P-series filter.

> **Note:** To help you remember the filter series, use the following guide:
>
> **N** for **N**ot resistant to oil,
> **R** for **R**esistant to oil,
> **P** for oil **P**roof.

2. Selection of filter efficiency (i.e., 95%, 99%, or 99.97%) depends on how much filter leakage can be accepted. Higher filter efficiency means lower filter leakage.

3. The choice of facepiece depends on the level of protection needed – that is, the assigned protection factor (APF) needed. See **Table 3** (page xx) for APFs of respirator classes, and see **Recommendations for Respirator Selection** (page xiv) for more information.

Codes for First Aid Data

Code	Definition
Eye:	
Irr immed	If this chemical contacts the eyes, immediately wash (irrigate) the eyes with large amounts of water, occasionally lifting the lower and upper lids. Get medical attention immediately.
Irr prompt	If this chemical contacts the eyes, promptly wash (irrigate) the eyes with large amounts of water, occasionally lifting the lower and upper lids. Get medical attention if any discomfort continues.
Frostbite	If eye tissue is frozen, seek medical attention immediately; if tissue is not frozen, immediately and thoroughly flush the eyes with large amounts of water for at least 15 minutes, occasionally lifting the lower and upper eyelids. If irritation, pain, swelling, lacrimation, or photophobia persist, get medical attention as soon as possible.
Medical attention	Get medical attention.
Skin:	
Blot/brush away	If irritation occurs, gently blot or brush away excess.
Dust off solid; water flush	If this solid chemical contacts the skin, dust it off immediately and then flush the contaminated skin with water. If this chemical or liquids containing this chemical penetrate the clothing, promptly remove the clothing and flush the skin with water. Get medical attention immediately.
Frostbite	If frostbite has occurred, seek medical attention immediately; do NOT rub the affected areas or flush them with water. In order to prevent further tissue damage, do NOT attempt to remove frozen clothing from frostbitten areas. If frostbite has NOT occurred, immediately and thoroughly wash contaminated skin with soap and water.
Molten flush immed/ sol-liq soap wash prompt	If this molten chemical contacts the skin, immediately flush the skin with large amounts of water. Get medical attention immediately. If this chemical (or liquids containing this chemical) contacts the skin, promptly wash the contaminated skin with soap and water. If this chemical or liquids containing this chemical penetrate the clothing, immediately remove the clothing and wash the skin with soap and water. If irritation persists after washing, get medical attention.
Soap flush immed	If this chemical contacts the skin, immediately flush the contaminated skin with soap and water. If this chemical penetrates the clothing, immediately remove the clothing and flush the skin with water. If irritation persists after washing, get medical attention.
Soap flush prompt	If this chemical contacts the skin, promptly flush the contaminated skin with soap and water. If this chemical penetrates the clothing, promptly remove the clothing and flush the skin with water. If irritation persists after washing, get medical attention.

Skin (continued):	
Soap prompt/molten flush immed	If this solid chemical or a liquid containing this chemical contacts the skin, promptly wash the contaminated skin with soap and water. If irritation persists after washing, get medical attention. If this molten chemical contacts the skin or nonimpervious clothing, immediately flush the affected area with large amounts of water to remove heat. Get medical attention immediately.
Soap wash	If this chemical contacts the skin, wash the contaminated skin with soap and water.
Soap wash immed	If this chemical contacts the skin, immediately wash the contaminated skin with soap and water. If this chemical penetrates the clothing, immediately remove the clothing, wash the skin with soap and water, and get medical attention promptly.
Soap wash prompt	If this chemical contacts the skin, promptly wash the contaminated skin with soap and water. If this chemical penetrates the clothing, promptly remove the clothing and wash the skin with soap and water. Get medical attention promptly.
Water flush	If this chemical contacts the skin, flush the contaminated skin with water. Where there is evidence of skin irritation, get medical attention.
Water flush immed	If this chemical contacts the skin, immediately flush the contaminated skin with water. If this chemical penetrates the clothing, immediately remove the clothing and flush the skin with water. Get medical attention promptly.
Water flush prompt	If this chemical contacts the skin, flush the contaminated skin with water promptly. If this chemical penetrates the clothing, immediately remove the clothing and flush the skin with water promptly. If irritation persists after washing, get medical attention.
Water wash	If this chemical contacts the skin, wash the contaminated skin with water.
Water wash immed	If this chemical contacts this skin, immediately wash the contaminated skin with water. If this chemical penetrates the clothing, immediately remove the clothing and wash the skin with water. If symptoms occur after washing, get medical attention immediately.
Water wash prompt	If this chemical contacts the skin, promptly wash the contaminated skin with water. If this chemical penetrates the clothing, promptly remove the clothing and wash the skin with water. If irritation persists after washing, get medical attention.

Breath:	
Resp support	If a person breathes large amounts of this chemical, move the exposed person to fresh air at once. If breathing has stopped, perform artificial respiration. Keep the affected person warm and at rest. Get medical attention as soon as possible.
Fresh air	If a person breathes large amounts of this chemical, move the exposed person to fresh air at once. Other measures are usually unnecessary.
Fresh air; 100% O_2	If a person breathes large amounts of this chemical, move the exposed person to fresh air at once. If breathing has stopped, perform artificial respiration. When breathing is difficult, properly trained personnel may assist the affected person by administering 100% oxygen. Keep the affected person warm and at rest. Get medical attention as soon as possible.
Swallow:	
Medical attention immed	If this chemical has been swallowed, get medical attention immediately.

Physical Description: Colorless gas with a sharp, irritating odor.
[**Note:** Shipped as a liquefied compressed gas. Often used in an aqueous solution.]

Chemical & Physical Properties:
MW: 80.9
BP: -88°F
Sol: 49%
FI.P: NA
IP: 11.62 eV
RGasD: 2.81
VP: 20 atm
FRZ: -124°F
UEL: NA
LEL: NA
Nonflammable Gas

Personal Protection/Sanitation (see Table 2):
Skin: Prevent skin contact (solution)/Frostbite
Eyes: Prevent eye contact (solution)/Frostbite
Wash skin: When contam (solution)
Remove: When wet or contam (solution)
Change: N.R.
Provide: Eyewash (liquid)
Quick drench (solution)
Frostbite wash

Respirator Recommendations (see Tables 3 and 4):
NIOSH/OSHA
30 ppm: Sa:Cf£/PaprAg£/GmFAg/ScbaF/SaF
§: ScbaF:Pd,Pp/SaF:Pd,Pp:AScba
Escape: GmFAg/ScbaE

Incompatibilities and Reactivities: Strong oxidizers, strong caustics, moisture, copper, brass, zinc
[**Note:** Hydrobromic acid is highly corrosive to most metals.]

Exposure Routes, Symptoms, Target Organs (see Table 5):
ER: Inh, Ing (solution), Con
SY: Irrit eyes, skin, nose, throat; solution: eye, skin burns; liquid: frostbite
TO: Eyes, skin, resp sys

First Aid (see Table 6):
Eye: Irr immed (solution)/Frostbite
Skin: Water flush immed (solution)/Frostbite
Breath: Resp support
Swallow: Medical attention immed (solution)

Hydrogen chloride

Formula:	CAS#:	RTECS#:	IDLH:

APPENDICES

Appendix A
NIOSH POTENTIAL OCCUPATIONAL CARCINOGENS

New Policy (Adopted September 1995)

For the past 20 plus years, NIOSH has subscribed to a carcinogen policy that was published in 1976 by Edward J. Fairchild, II, Associate Director for Cincinnati Operations, which called for "no detectable exposure levels for proven carcinogenic substances" (Annals of the New York Academy of Sciences, 271:200-207, 1976). This was in response to a generic OSHA rulemaking on carcinogens. Because of advances in science and in approaches to risk assessment and risk management, NIOSH has adopted a more inclusive policy. NIOSH recommended exposure limits (RELs) will be based on risk evaluations using human or animal health effects data, and on an assessment of what levels can be feasibly achieved by engineering controls and measured by analytical techniques. To the extent feasible, NIOSH will project not only a no effect exposure, but also exposure levels at which there may be residual risks. This policy applies to all workplace hazards, including carcinogens, and is responsive to Section 20(a)(3) of the Occupational Safety and Health Act of 1970, which charges NIOSH to ". . .describe exposure levels that are safe for various periods of employment, including but not limited to the exposure levels at which no employee will suffer impaired health or functional capacities or diminished life expectancy as a result of his work experience."

The effect of this new policy will be the development, whenever possible, of quantitative RELs that are based on human and/or animal data, as well as on the consideration of technological feasibility for controlling workplace exposures to the REL. Under the old policy, RELs for most carcinogens were non-quantitative values labeled "lowest feasible concentration (LFC)." [Note: There are a few exceptions to LFC RELs for carcinogens (e.g., RELs for asbestos, formaldehyde, benzene, and ethylene oxide are quantitative values based primarily on analytical limits of detection or technological feasibility). Also, in 1989, NIOSH adopted several quantitative RELs for carcinogens from OSHA's permissible exposure limit (PEL) update.]

Under the new policy, NIOSH will also recommend the complete range of respirators (as determined by the NIOSH Respirator Decision Logic) for carcinogens with quantitative RELs. In this way, respirators will be consistently recommended regardless of whether a substance is a carcinogen or a non-carcinogen.

Appendix A (Continued)
NIOSH POTENTIAL OCCUPATIONAL CARCINOGENS

Old Policy

In the past, NIOSH identified numerous substances that should be treated as potential occupational carcinogens even though OSHA might not have identified them as such. In determining their carcinogenicity, NIOSH used the OSHA classification outlined in 29 CFR 1990.103, which states in part:

> Potential occupational carcinogen means any substance, or combination or mixture of substances, which causes an increased incidence of benign and/or malignant neoplasms, or a substantial decrease in the latency period between exposure and onset of neoplasms in humans or in one or more experimental mammalian species as the result of any oral, respiratory or dermal exposure, or any other exposure which results in the induction of tumors at a site other than the site of administration. This definition also includes any substance which is metabolized into one or more potential occupational carcinogens by mammals.

When thresholds for carcinogens that would protect 100% of the population had not been identified, NIOSH usually recommended that occupational exposures to carcinogens be limited to the lowest feasible concentration. To ensure maximum protection from carcinogens through the use of respiratory protection, NIOSH also recommended that only the most reliable and protective respirators be used. These respirators include (1) a self-contained breathing apparatus (SCBA) that has a full facepiece and is operated in a positive pressure mode, or (2) a supplied air respirator that has a full facepiece and is operated in a pressure demand or other positive pressure mode in combination with an auxiliary SCBA operated in a pressure demand or other positive pressure mode.

Recommendations to be Revised

The RELs and respirator recommendations for carcinogens listed in this edition of the *Pocket Guide* still reflect the old policy. Changes in the RELs and respirator recommendations that reflect the new policy will be included in future editions.

Appendix B
THIRTEEN OSHA-REGULATED CARCINOGENS

Without establishing PELs, OSHA promulgated standards in 1974 to regulate the industrial use of the following 13 chemicals identified as potential occupational carcinogens:

- 2-Acetylaminofluorene
- 4-Aminodiphenyl
- Benzidine
- bis-Chloromethyl ether
- 3,3'-Dichlorobenzidine
- 4-Dimethylaminoazobenzene
- Ethyleneimine
- Methyl chloromethyl ether
- α-Naphthylamine
- β-Naphthylamine
- 4-Nitrobiphenyl
- N-Nitrosodimethylamine
- β-Propiolactone

Exposures of workers to these 13 chemicals are to be controlled through the required use of engineering controls, work practices, and personal protective equipment, including respirators. OSHA respirator requirements for these chemicals are provided in Appendix E (page 351). See 29 CFR 1910.1003 - 1910.1016 for more specific details of these requirements.

Appendix C
SUPPLEMENTARY EXPOSURE LIMITS

Aldehydes (Low-Molecular-Weight)

Exposure to acetaldehyde has produced nasal tumors in rats and laryngeal tumors in hamsters, and exposure to malonaldehyde has produced thyroid gland and pancreatic islet cell tumors in rats. NIOSH therefore recommends that acetaldehyde and malonaldehyde be considered potential occupational carcinogens in conformance with the OSHA carcinogen policy. Testing has not been completed to determine the carcinogenicity of the following nine related low-molecular-weight aldehydes:

- Acrolein (CAS# 107-02-8)
- Butyraldehyde (CAS# 123-72-8)
- Crotonaldehyde (CAS# 4170-30-3)
- Glutaraldehyde (CAS# 111-30-8)
- Glyoxal (CAS# 107-22-2)
- Paraformaldehyde (CAS# 30525-89-4)
- Propiolaldehyde (CAS# 624-67-9)
- Propionaldehyde (CAS# 123-38-6)
- n-Valeraldehyde (CAS# 110-62-3)

However, the limited studies to date indicate that these substances have chemical reactivity and mutagenicity similar to acetaldehyde and malonaldehyde. Therefore, NIOSH recommends that careful consideration should be given to reducing exposures to these nine related aldehydes. Further information can be found in *NIOSH Current Intelligence Bulletin 55: Carcinogenicity of Acetaldehyde and Malonaldehyde, and Mutagenicity of Related Low-Molecular-Weight Aldehydes* [DHHS (NIOSH) Publication No. 91-112]. This document is available on the NIOSH Web site (http://www.cdc.gov/niosh/91112_55.html).

Asbestos

NIOSH considers asbestos to be a potential occupational carcinogen and recommends that exposures be reduced to the lowest feasible concentration. For asbestos fibers >5 micrometers in length, NIOSH recommends a REL of 100,000 fibers per cubic meter of air (100,000 fibers/m^3), which is equal to 0.1 fiber per cubic centimeter of air (0.1 fiber/cm^3), as determined by a 400-liter air sample collected over 100 minutes in accordance with NIOSH Analytical Method #7400. Airborne asbestos fibers are defined as those particles having (1) an aspect ratio of 3 to 1 or greater and (2) the mineralogic characteristics (that is, the crystal structure and elemental composition) of the asbestos minerals and their nonasbestiform analogs. The asbestos minerals are defined as chrysotile, crocidolite, amosite (cummingtonite-grunerite), anthophyllite, tremolite, and actinolite. In addition, airborne cleavage fragments from the nonasbestiform habits of the serpentine minerals antigorite and lizardite, and the amphibole minerals contained in the series cummingtonite-grunerite, tremolite-ferroactinolite, and glaucophane-riebeckite should also be counted as fibers provided they meet the criteria for a fiber when viewed microscopically.

As found in 29 CFR 1910.1001, the OSHA PEL for asbestos fibers (i.e., actinolite asbestos, amosite, anthophyllite asbestos, chrysotile, crocidolite, and tremolite asbestos) is an 8-hour TWA airborne concentration of 0.1 fiber (longer than 5 micrometers and having a length to diameter ratio of at least 3 to 1) per cubic centimeter of air (0.1 fiber/cm^3), as determined by the membrane filter method at approximately 400X magnification with phase contrast illumination. No worker should be exposed in excess of 1 fiber/cm^3 (excursion limit) as averaged over a sampling period of 30 minutes.

Appendix C (Continued)
SUPPLEMENTARY EXPOSURE LIMITS

Asphalt Fumes

The recommendations provided below are from *Health Effects of Occupational Exposure to Asphalt* [DHHS (NIOSH) Publication No. 2001-110] (http://www.cdc.gov/niosh/01-110pd.html).

Occupational exposure to asphalt fumes shall be controlled so that employees are not exposed to the airborne particulates at a concentration greater than 5 mg/m^3, determined during any 15-minute period.

Data regarding the potential carcinogenicity of paving asphalt fumes in humans are limited, and no animal studies have examined the carcinogenic potential of either field- or laboratory-generated samples of paving asphalt fume condensates. NIOSH concludes that the collective data currently available from studies on paving asphalt provide insufficient evidence for an association between lung cancer and exposure to asphalt during paving.

The results from epidemiologic studies indicate that roofers are at an increased risk of lung cancer, but it is uncertain whether this increase can be attributed to asphalt and/or to other exposures such as coal tar or asbestos. Data from experimental studies in animals and cultured mammalian cells indicate that laboratory-generated roofing asphalt fume condensates are genotoxic and cause skin tumors in mice when applied dermally. Furthermore, a known carcinogen (Benzo(a)pyrene) was detected in field-generated roofing fumes. The collective health and exposure data provide sufficient evidence for NIOSH to conclude that roofing asphalt fumes are a potential occupational carcinogen.

The available data indicate that although not all asphalt-based paint formulations may exert genotoxicity, some are genotoxic and carcinogenic in animals. No published data examine the carcinogenic potential of asphalt-based paints in humans, but NIOSH concludes that asphalt-based paints are potential occupational carcinogens.

Benzidine-, o-Tolidine-, and o-Dianisidine-based Dyes

In December 1980, OSHA and NIOSH jointly published the *Health Hazard Alert: Benzidine-, o-Tolidine-, and o-Dianisidine-based Dyes* [DHHS (NIOSH) Publication No. 81-106] (http://www.cdc.gov/niosh/81-106.html). In this Alert, OSHA and NIOSH concluded that benzidine and benzidine-based dyes were potential occupational carcinogens and recommended that worker exposure be reduced to the lowest feasible level. OSHA and NIOSH further concluded that o-tolidine and o-dianisidine (and dyes based on them) may present a cancer risk to workers and should be handled with caution and exposure minimized.

Carbon Black

NIOSH considers "Carbon Black" to be the material consisting of more than 80% elemental carbon, in the form of near-spherical colloidal particles and coalesced particle aggregates of colloidal size, that is obtained by the partial combustion or thermal decomposition of hydrocarbons. The NIOSH REL (10-hour TWA) for carbon black is 3.5 mg/m^3. Polycyclic aromatic hydrocarbons (PAHs), particulate polycyclic organic material (PPOM), and polynuclear aromatic hydrocarbons (PNAs) are terms frequently used to describe various petroleum-based substances that NIOSH considers to be potential occupational carcinogens. Since some of these aromatic hydrocarbons may be formed during the manufacture of carbon black (and become adsorbed on the carbon black), the NIOSH REL (10-hour TWA) for carbon black in the presence

of PAHs is 0.1 mg PAHs/m^3 (measured as the cyclohexane-extractable fraction). The OSHA PEL (8-hour TWA) for carbon black is 3.5 mg/m^3.

Chloroethanes

NIOSH considers the following four chemicals to be potential occupational carcinogens:

- Ethylene dichloride
- Hexachloroethane
- 1,1,2,2-Tetrachloroethane
- 1,1,2-Trichloroethane

Additionally, NIOSH recommends that the following five other chloroethane compounds be treated in the workplace with caution because of their structural similarity to the four chloroethanes shown to be carcinogenic in animals:

- 1,1-Dichloroethane
- Ethyl chloride
- Methyl chloroform
- Pentachloroethane
- 1,1,1,2-Tetrachloroethane

Chromic Acid and Chromates (as CrO_3), Chromium(II) and Chromium(III) Compounds (as Cr), and Chromium Metal (as Cr)

The NIOSH REL (10-hour TWA) is 0.001 mg Cr(VI)/m^3 for all hexavalent chromium [Cr(VI)] compounds. NIOSH considers all Cr(VI) compounds (including chromic acid, tert-butyl chromate, zinc chromate, and chromyl chloride) to be potential occupational carcinogens. The NIOSH REL (8-hour TWA) is 0.5 mg Cr/m^3 for chromium metal and chromium(II) and chromium(III) compounds.

The OSHA PEL is 0.005 mg CrO_3/m^3 (8-hour TWA) for chromic acid and chromates (including tert-butyl chromate with a "skin" designation and zinc chromate); 0.5 mg Cr/m^3 (8-hour TWA) for chromium(II) and chromium(III) compounds; and 1 mg Cr/m^3 (8-hour TWA) for chromium metal and insoluble salts.

Coal Dust and Coal Mine Dust

The NIOSH REL (10-hour TWA) for respirable coal mine dust is 1 mg/m^3, measured using a coal mine personal sampler unit (CPSU) as defined in 30 CFR 74.2. The REL is equivalent to 0.9 mg/m^3 measured according to the ISO/CEN/ACGIH (International Standards Organization/ Comité Européen de Normalisation/American Conference of Governmental Industrial Hygienists) definition of respirable dust. The REL applies to respirable coal mine dust and respirable coal dust in occupations other than mining. NIOSH recommends a separate REL for crystalline silica. See NIOSH publication 95-106 (*Criteria for a Recommended Standard - Occupational Exposure to Respirable Coal Mine Dust*) for more detailed information.

Coal Tar Pitch Volatiles

NIOSH considers coal tar products (i.e., coal tar, coal tar pitch, or creosote) to be potential occupational carcinogens; the NIOSH REL (10-hour TWA) for coal tar products is 0.1 mg/m^3 (cyclohexane-extractable fraction).

The OSHA PEL (8-hour TWA) for coal tar pitch volatiles is 0.2 mg/m^3 (benzene-soluble fraction). OSHA defines "coal tar pitch volatiles" in 29 CFR 1910.1002 as the fused polycyclic hydrocarbons that volatilize from the distillation residues of coal, petroleum (excluding asphalt),

wood, and other organic matter and includes substances such as anthracene, benzo(a)pyrene (BaP), phenanthrene, acridine, chrysene, pyrene, etc.

Coke Oven Emissions

The production of coke by the carbonization of bituminous coal leads to the release of chemically-complex emissions from coke ovens that include both gases and particulate matter of varying chemical composition. The emissions include coal tar pitch volatiles (e.g., particulate polycyclic organic matter [PPOM], polycyclic aromatic hydrocarbons [PAHs], and polynuclear aromatic hydrocarbons [PNAs]), aromatic compounds (e.g., benzene and β-naphthylamine), trace metals (e.g., arsenic, beryllium, cadmium, chromium, lead, and nickel), and gases (e.g., nitric oxides and sulfur dioxide).

Cotton Dust (raw)

NIOSH recommends reducing exposures to cotton dust to the lowest feasible concentration to reduce the prevalence and severity of byssinosis; the REL is <0.200 mg/m^3 (as lint free cotton dust).

As found in OSHA Table Z-1 (29 CFR 1910.1000), the PEL for cotton dust (raw) is 1 mg/m^3 for the cotton waste processing operations of waste recycling (sorting, blending, cleaning, and willowing) and garnetting. PELs for other sectors (as found in 29 CFR 1910.1043) are 0.200 mg/m^3 for yarn manufacturing and cotton washing operations, 0.500 mg/m^3 for textile mill waste house operations or for dust from "lower grade washed cotton" used during yarn manufacturing, and 0.750 mg/m^3 for textile slashing and weaving operations. The OSHA standard 29 CFR 1910.1043 does not apply to cotton harvesting, ginning, or the handling and processing of woven or knitted materials and washed cotton. All PELs for cotton dust are mean concentrations of lint-free, respirable cotton dust collected by a vertical elutriator or an equivalent method and averaged over an 8-hour period.

Lead

NIOSH considers "Lead" to mean metallic lead, lead oxides, and lead salts (including organic salts such as lead soaps but excluding lead arsenate). The NIOSH REL for lead (8-hour TWA) is 0.050 mg/m^3; air concentrations should be maintained so that worker blood lead remains less than 0.060 mg Pb/100 g of whole blood.

OSHA considers "Lead" to mean metallic lead, all inorganic lead compounds (lead oxides and lead salts), and a class of organic compounds called soaps; all other lead compounds are excluded from this definition. The OSHA PEL (8-hour TWA) is 0.050 mg/m^3; other OSHA requirements can be found in 29 CFR 1910.1025. The OSHA PEL (8 hour-TWA) for lead in "non-ferrous foundries with less than 20 employees" is 0.075 mg/m^3.

Mineral Dusts

The OSHA PELS for "mineral dusts" listed below are from Table Z-3 of 29 CFR 1910.1000. The OSHA PEL (8-hour TWA) for crystalline silica (as respirable quartz) is either 250 mppcf divided by the value "%SiO_2 + 5" or 10 mg/m^3 divided by the value

"%SiO_2 + 2." The OSHA PEL (8-hour TWA) for crystalline silica (as total quartz) is 30 mg/m^3 divided by the value "%SiO_2 + 2." The OSHA PELs (8-hour TWAs) for cristobalite and tridymite are ½ the values calculated above using the count or mass formulae for quartz.

The OSHA PEL (8-hour TWA) for amorphous silica (including diatomaceous earth) is either 80 mg/m^3 divided by the value "%SiO_2," or 20 mppcf.

The OSHA PELs (8-hour TWAs) for talc (not containing asbestos), mica, and soapstone are 20 mppcf. The OSHA PEL (8-hour TWA) for portland cement is 50 mppcf. The OSHA PEL (8-hour TWA) for graphite (natural) is 15 mppcf. The PELs for talc (not containing asbestos), mica, soapstone, and portland cement are applicable if the material contains less than 1% crystalline silica.

The OSHA PEL (8-hour TWA) for coal dust (as the respirable fraction) containing less than 5% SiO_2 is 2.4 mg/m^3 divided by the value "%SiO_2 + 2." The OSHA PEL (8-hour TWA) for coal dust (as the respirable fraction) containing greater than or equal to 5% SiO_2 is 10 mg/m^3 divided by the value "%SiO_2 + 2."

NIAX® Catalyst ESN

In May 1978, OSHA and NIOSH jointly published *Current Intelligence Bulletin (CIB) 26: NIAX® Catalyst ESN*. In this CIB, OSHA and NIOSH recommended that occupational exposure to NIAX® Catalyst ESN, its components, dimethylaminopropionitrile and bis(2-(dimethylamino)ethyl)ether, as well as formulations containing either component, be minimized. Exposures should be limited to as few workers as possible, while minimizing workplace exposure concentrations with effective work practices and engineering controls. Exposed workers should be carefully monitored for potential disorders of the nervous and genitourinary system. Although substitution is a possible control measure, alternatives to NIAX® Catalyst ESN or its components should be carefully evaluated with regard to possible adverse health effects.

Trichloroethylene

NIOSH considers trichloroethylene (TCE) to be a potential occupational carcinogen and recommends a REL of 2 ppm (as a 60-minute ceiling) during the use of TCE as an anesthetic agent, and 25 ppm (as a 10-hour TWA) during all other exposures.

Tungsten Carbide (Cemented)

"Cemented tungsten carbide" or "hard metal" refers to a mixture of tungsten carbide, cobalt, and sometimes metal oxides or carbides and other metals (including nickel). When the cobalt (Co) content exceeds 2%, its contribution to the potential hazard is judged to exceed that of tungsten carbide. Therefore, the NIOSH REL (10-hour TWA) for cemented tungsten carbide containing >2% Co is 0.05 mg Co/m^3; the applicable OSHA PEL is 0.1 mg Co/m^3 (8-hour TWA). Nickel (Ni) may sometimes be used as a binder rather than cobalt. NIOSH considers cemented tungsten carbide containing nickel to be a potential occupational carcinogen and recommends a REL of 0.015 mg Ni/m^3 (10-hour TWA). The OSHA PEL for Insoluble Nickel (i.e., a 1 mg Ni/m^3 8-hour TWA) applies to mixtures of tungsten carbide and nickel.

Appendix D
SUBSTANCES WITH NO ESTABLISHED RELs

After reviewing available published literature, NIOSH provided comments to OSHA on August 1, 1988, regarding the "Proposed Rule on Air Contaminants" (29 CFR 1910, Docket No. H-020). In these comments, NIOSH questioned whether the PELs proposed (and listed below) for the following substances included in the *Pocket Guide* were adequate to protect workers from recognized health hazards. The current PEL for each of these compounds is listed on the chemical page for each substance in the *Pocket Guide*. See pages *xi-xii* for a discussion of the vacated PELs.

- Acetylene tetrabromide [**TWA** 1 ppm]
- Chlorobenzene [**TWA** 75 ppm]
- Ethyl bromide [**TWA** 200 ppm, **STEL** 250 ppm]
- Ethylene glycol [**C** 50 ppm]
- Ethyl ether [**TWA** 400 ppm, **STEL** 500 ppm]
- Fenthion [**TWA** 0.2 mg/m^3 (skin)]
- Furfural [**TWA** 2 ppm (skin)]
- 2-Isopropoxyethanol [**TWA** 25 ppm]
- Isopropyl acetate [**TWA** 250 ppm, **STEL** 310 ppm]
- Isopropylamine [**TWA** 5 ppm, **STEL** 10 ppm]
- Manganese tetroxide (as Mn) [**TWA** 1 mg/m^3]
- Molybdenum (soluble compounds as Mo) [**TWA** 5 mg/m^3]
- Nitromethane [**TWA** 100 ppm]
- m-Toluidine [**TWA** 2 ppm (skin)]
- Triethylamine [**TWA** 10 ppm, **STEL** 15 ppm]

At that time, NIOSH also conducted a limited evaluation of the literature and concluded that the documentation cited by OSHA was inadequate to support the proposed PEL (as an 8-hour TWA) of 10 mg/m^3 for the compounds listed below. The current PEL for magnesium oxide fume is 15 mg/m^3 (8-hour TWA, total particulate), and the current PEL for molybdenum (insoluble compounds as Mo) is 15 mg/m^3 (8-hour TWA, total dust). For the other compounds listed below the current PEL is 15 mg/m^3 (8-hour TWA, total dust) and 5 mg/m^3 (8-hour TWA, respirable dust).

- α-Alumina
- Benomyl
- Emery
- Glycerine (mist)
- Graphite (synthetic)
- Magnesium oxide fume
- Molybdenum (insoluble compounds as Mo)
- Particulates not otherwise regulated
- Picloram
- Rouge

Appendix E
OSHA Respirator Requirements for Selected Chemicals

Revisions to the OSHA Respiratory Protection Standard (29 CFR 1910.134) became effective on April 8, 1998. Incorporated within the preamble of this ruling were changes to OSHA regulations for several chemicals or substances, which are listed as subheadings in blue text throughout this appendix. These subheadings, which are also the titles of the affected standards within 29 CFR 1910 and 29 CFR 1926, are followed by the standard number(s) in parentheses and the OSHA respirator requirements. Fit testing is required by OSHA for all tight-fitting air-purifying respirators. *Please consult 29 CFR 1910.134 for the full content of the changes that apply.* For all of the chemicals listed in this appendix, any respirators that are permitted at higher environmental concentrations can be used at lower concentrations.

13 Carcinogens (4-Nitrobiphenyl, etc.) (1910.1003)

Employees engaged in handling operations involving the carcinogens listed below must be provided with, and required to wear and use, a *half-mask* filter-type respirator for dusts, mists, and fumes. A respirator affording higher levels of protection than this respirator may be substituted.

- 2-Acetylaminofluorene
- 4-Aminodiphenyl
- Benzidine
- bis-Chloromethyl ether
- 3,3'-Dichlorobenzidine (and its salts)
- 4-Dimethylaminoazobenezene
- Ethyleneimine
- Methyl chloromethyl ether
- α-Naphthylamine
- β-Naphthylamine
- 4-Nitrobiphenyl
- N-Nitrosodimethylamine
- β-Propiolactone

Airborne Concentration (as As) or Condition of Use	Required Respirator
≤ 100 µg/m^3 (micrograms per cubic meter)	**(1)** Half-mask air-purifying respirator equipped with high-efficiency filter*; or **(2)** Any half-mask supplied air respirator.
≤ 500 µg/m^3	**(1)** Full facepiece air-purifying respirator equipped with high-efficiency filter*; **(2)** Any full-facepiece supplied-air respirator; or **(3)** Any full-facepiece self-contained breathing apparatus.
≤ 10,000 µg/m^3	**(1)** Powered air-purifying respirators in all inlet face coverings with high-efficiency filters*; or **(2)** Half-mask supplied-air respirators operated in positive-pressure mode.
≤ 20,000 µg/m^3	Supplied-air respirator with full facepiece, hood, or helmet or suit, operated in positive-pressure mode.
> 20,000 µg/m^3, unknown concentrations, or firefighting	Any full-facepiece self-contained breathing apparatus operated in positive-pressure mode.

* A high-efficiency filter means a filter that is at least 99.97% efficient against mono-disperesed particles of 0.3 µm (micrometers) in diameter or higher.

Requirements for Respiratory Protection for Inorganic Arsenicals *With Significant Vapor Pressure*

Airborne Concentration (as As) or Condition of Use	Required Respirator
≤ 100 µg/m^3 (micrograms per cubic meter)	**(1)** Half-mask* air-purifying respirator equipped with high-efficiency filter** and acid gas cartridge; or **(2)** Any half-mask* supplied-air respirator.
≤ 500 µg/m^3	**(1)** Front- or back-mounted gas mask equipped with high-efficiency filter** and acid gas canister; **(2)** Any full-facepiece supplied-air respirator; or **(3)** Any full-facepiece self-contained breathing apparatus.
≤ 10,000 µg/m^3	Half-mask* supplied-air respirator operated in positive-pressure mode.
≤ 20,000 µg/m^3	Supplied-air respirator with full facepiece, hood, or helmet or suit, operated in positive-pressure mode.
> 20,000 µg/m^3, unknown concentrations, or firefighting	Any full-facepiece self-contained breathing apparatus operated in positive-pressure mode.

* Half-mask respirators shall not be used for protection against arsenic trichloride, as it is rapidly absorbed through the skin.
** A high-efficiency filter means a filter that is at least 99.97% efficient against mono-disperesed particles of 0.3 µm (micrometers) in diameter or higher.

Asbestos (1910.1001 & 1926.1101)

Airborne Concentration or Condition of Use	Required Respirator
≤ 1 f/cm^3 (fibers per cubic centimeter) (10 X PEL)	Half-mask air-purifying respirator other than a disposable respirator, equipped with high-efficiency filters*.
≤ 5 f/cm^3 (50 X PEL)	Full-facepiece air-purifying respirator equipped with high-efficiency filters*.
≤ 10 f/cm^3 (100 X PEL)	Any powered air-purifying respirator equipped with high-efficiency filters* or any supplied-air respirator operated in continuous-flow mode.
≤ 100 f/cm^3 (1,000 X PEL)	Full-facepiece supplied air respirator operated in pressure-demand mode.
> 100 f/cm^3 (1,000 X PEL), or unknown concentrations	Full-facepiece supplied-air respirator operated in pressure-demand mode, equipped with an auxiliary positive-pressure self-contained breathing apparatus.

* A high-efficiency filter means a filter that is at least 99.97% efficient against mono-dispersed particles of 0.3 µm (micrometers) in diameter or higher.

Benzene (1910.1028)

Airborne Concentration or Condition of Use	Required Respirator
≤ 10 ppm (parts per million)	Half-mask air-purifying respirator with organic vapor cartridge.
≤ 50 ppm	**(1)** Full-facepiece respirator with organic vapor cartridges; or **(2)** Full-facepiece gas mask with chin-style canisters*.
≤ 100 ppm	Full-facepiece powered air-purifying respirator with organic vapor canister*.
≤ 1,000 ppm	Supplied-air respirator with full facepiece in positive-pressure mode.
> 1,000 ppm or unknown concentration	**(1)** Self-contained breathing apparatus with full facepiece in positive-pressure mode; or **(2)** Full-facepiece positive-pressure supplied-air respirator with auxiliary self-contained air supply.
Escape	**(1)** Any organic vapor gas mask; or **(2)** Any self-contained breathing apparatus with full facepiece.
Firefighting	Full-facepiece self-contained breathing apparatus in positive-pressure mode.

* Canisters must have a minimum service life of four (4) hours when tested at 150 ppm benzene, at a flow rate of 64 liters per minute (LPM), 25°C, and 85% relative humidity for non-powered air-purifying respirators. The flow rate shall be 115 LPM and 170 LPM, respectively, for tight-fitting and loose-fitting powered air-purifying respirators.

OSHA Respirator Requirements for Selected Chemicals

1,3-Butadiene (1910.1051)

Airborne Concentration or Condition of Use	Required Respirator
≤ 5 ppm (parts per million)	Air-purifying half-mask or full-facepiece respirator equipped with approved butadiene or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 4 hours.
≤ 10 ppm	Air-purifying half-mask or full-facepiece respirator equipped with approved butadiene or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 3 hours.
≤ 25 ppm	**(1)** Air-purifying half-mask or full-facepiece respirator equipped with approved butadiene or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 2 hours; **(2)** Any powered air-purifying respirator equipped with approved butadiene or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every [1] hour; or **(3)** Continuous-flow supplied-air respirator equipped with a hood or helmet.
≤ 50 ppm	**(1)** Air-purifying full-facepiece respirator equipped with approved butadiene or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every [1] hour; or **(2)** Powered air-purifying respirator (PAPR) equipped with a tight-fitting facepiece and approved butadiene or organic vapor cartridges. PAPR cartridges shall be replaced every [1] hour.
≤ 1,000 ppm	Supplied-air respirator equipped with a half-mask or full facepiece and operated in a pressure-demand or other positive-pressure mode.
> 1,000 ppm, unknown concentration, or firefighting	**(1)** Self-contained breathing apparatus equipped with a full facepiece and operated in a pressure-demand or other positive-pressure mode; or **(2)** Any supplied-air respirator equipped with a full facepiece and operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode.
Escape from IDLH conditions (IDLH is 2,000 ppm)	**(1)** Any positive-pressure self-contained breathing apparatus with an appropriate service life; or **(2)** Any air-purifying full-facepiece respirator equipped with a front- or back-mounted butadiene or organic vapor canister.

OSHA Respirator Requirements for Selected Chemicals

Cadmium (1910.1027 & 1926.1127)

Airborne Concentration or Condition of Use	Required Respirator
≤ 50 µg/m^3 (micrograms per cubic meter)	Half-mask, air-purifying respirator equipped with a high-efficiency filter*.
≤ 125 µg/m^3	**(1)** Powered air-purifying respirator with a loose-fiting hood or helmet equipped with a high-efficiency filter*; or **(2)** Supplied-air respirator with a loose-fitting hood or helmet facepiece operated in continuous-flow mode.
≤ 250 µg/m^3	**(1)** Full-facepiece air-purifying respirator equipped with a high-efficiency filter*; **(2)** Powered air-purifying respirator with a tight-fitting half-mask equipped with a high-efficiency filter*; or **(3)** Supplied-air respirator with a tight-fitting half-mask operated in continuous-flow mode.
≤ 1,250 µg/m^3	**(1)** Powered air-purifying respirator with a tight-fitting full facepiece equipped with a high-efficiency filter*; or **(2)** Supplied-air respirator with a tight-fitting full facepiece operated in continuous-flow mode.
≤ 5,000 µg/m^3	Supplied-air respirator with half-mask or full facepiece operated in pressure-demand or other positive-pressure mode.
> 5,000 µg/m^3 or unknown concentration	**(1)** Self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode; or **(2)** Supplied-air respirator with a full facepiece operated in pressure-demand or other positive-pressure mode and equipped with an auxiliary escape-type self-contained breathing apparatus operated in pressure-demand mode.
Firefighting	Self-contained breathing apparatus with full facepiece operated in pressure-demand or other positive-pressure mode.

Note: Quantitative fit testing is required for all tight-fitting air-purifying respirators where airborne concentration of cadmium exceeds 10 times the TWA PEL (10 X 5 µg/m^3 = 50 µg/m^3). A full-facepiece respirator is required when eye irritation is expected.

* A high-efficiency filter means a filter that is at least 99.97% efficient against mono-dispersed particles of 0.3 µm (micrometers) in diameter or higher.

Coke oven emissions (1910.1029)

Airborne Concentration	Required Respirator
≤ 1500 µg/m^3 (micrograms per cubic meter)	**(1)** Any particulate filter respirator for dust and mist except single-use respirator; or **(2)** Any particulate filter respirator or combination chemical cartridge and particulate filter respirator for coke oven emissions.
Any concentrations	**(1)** Type C supplied-air respirator [see page 360] operated in pressure-demand or continuous-flow mode; **(2)** Powered air-purifying particulate filter respirator for dust and mist; or **(3)** Powered air-purifying particulate filter respirator or combination chemical cartridge and particulate filter respirator for coke oven emissions.

OSHA Respirator Requirements for Selected Chemicals

Cotton dust (1910.1043)

Airborne Concentration	Required Respirator
≤ 5 X PEL	Disposable respirator* with a particulate filter.
≤ 10 X PEL	Quarter- or half-mask respirator, other than a disposable respirator, equipped with particulate filters.
≤ 100 X PEL	Full-facepiece respirator equipped with high-efficiency particulate filters**.
> 100 X PEL	Powered air-purifying respirator equipped with high-efficiency particulate filters.

* A disposable respirator means the filter element is an inseparable part of the respirator.
** A high-efficiency filter means a filter that is at least 99.97% efficient against mono-dispersed particles of 0.3 µm (micrometers) in diameter or higher.

Notes:
Self-contained breathing apparatus are not required but are permitted respirators.

Supplied-air respirators are not required but are permitted under the following conditions:
Cotton dust concentration not greater than 10X the PEL: Any supplied air respirator; not greater than 100X the PEL: Any supplied-air respirator with full facepiece, helmet, or hood; greater than 100X the PEL: Supplied-air respirator operated in positive-pressure mode.

1,2-Dibromo-3-chloropropane (1910.1044)

Airborne Concentration or Condition of Use	Required Respirator
≤ 10 ppb (parts per billion)	**(1)** Any supplied-air respirator; or **(2)** any self-contained breathing apparatus.
≤ 50 ppb	**(1)** Any supplied-air respirator with full facepiece, helmet, or hood; or **(2)** any self-contained breathing apparatus with full facepiece.
≤ 1,000 ppb	Type C supplied-air respirator [see page 360] operated in pressure-demand or other positive-pressure or continuous-flow mode.
≤ 2,000 ppb	Type C supplied-air respirator [see page 360] with full facepiece operated in pressure-demand or other positive-pressure mode, or with full facepiece, helmet, or hood operated in continuous-flow mode.
> 2,000 ppb or entry and escape from unknown concentrations	**(1)** A combination respirator which includes a Type C supplied-air respirator [see page 360] with full facepiece operated in pressure-demand or other positive pressure or continuous-flow mode and an auxiliary self-contained breathing apparatus operated in pressure-demand or positive-pressure mode; or **(2)** Self-contained breathing apparatus with full facepiece operated in pressure-demand or other positive-pressure mode.
Firefighting	Self-contained breathing apparatus with full facepiece operated in pressure-demand or other positive-pressure mode.

Ethylene oxide (1910.1047)

Airborne Concentration or Condition of Use	Required Respirator
≤ 50 ppm (parts per million)	Full-facepiece respirator with ethylene oxide approved canister, front- or back-mounted.
≤ 2,000 ppm	**(1)** Positive-pressure supplied-air respirator equipped with full facepiece, hood, or helmet; or **(2)** Continuous-flow supplied-air respirator (positive-pressure) equipped with hood, helmet, or suit.
> 2,000 ppm or unknown concentrations	**(1)** Positive-pressure self-contained breathing apparatus equipped with full facepiece; or **(2)** Positive-pressure full-facepiece supplied-air respirator equipped with an auxiliary positive-pressure self-contained breathing apparatus.
Firefighting	Positive-pressure self-contained breathing apparatus equipped with full facepiece.
Escape	Any respirator described above.

Formaldehyde (1910.1048)

Airborne Concentration or Condition of Use	Required Respirator
≤ 7.5 ppm (parts per million) (10 X PEL)	Full-facepiece respirator with cartridges or canisters specifically approved for protection against formaldehyde*.
≤ 75 ppm (100 X PEL)	**(1)** Full-face mask respirator with chin style or chest- or back-mounted type with industrial size canister specifically approved for protection against formaldehyde; or **(2)** Type C supplied-air respirator [see page 360], demand type or continuous flow type, with full facepiece, hood, or helmet.
> 75 ppm (100 X PEL) or unknown concentrations (emergencies)	**(1)** Self-contained breathing apparatus with positive-pressure full-facepiece; or **(2)** Combination supplied-air, full-facepiece positive-pressure respirator with auxiliary self-contained air supply.
Firefighting	Self-contained breathing apparatus with positive-pressure in full facepiece.
Escape	**(1)** Self-contained breathing apparatus in demand or pressure-demand mode; or **(2)** Full-face mask respirator with chin-style or front- or back-mounted type industrial size canister specifically approved for protection against formaldehyde.

* A half-mask respirator with cartridges specifically approved for protection against formaldehyde can be substituted for the full-facepiece respirator providing that effective gas-proof goggles are provided and used in combination with the half-mask respirator.

Lead (1910.1025 & 1926.62)

Respirator Requirements of 1910.1025 (General Industry Lead Standard)

Airborne Concentration or Condition of Use	Required Respirator
≤ 0.5 mg/m^3 (milligrams per cubic meter) (10 X PEL)	Half-mask* air-purifying respirator equipped with high-efficiency filters**.
≤ 2.5 mg/m^3 (50 X PEL)	Full-facepiece air-purifying respirator with high-efficiency filters**.
≤ 50 mg/m^3 (1000 X PEL)	**(1)** Any powered air-purifying respirator with high-efficiency filters**; or **(2)** Half-mask* supplied-air respirator operated in positive-pressure mode.
≤ 100 mg/m^3 (2000 X PEL)	Supplied-air respirators with full facepiece, hood, helmet, or suit, operated in positive-pressure mode.
> 100 mg/m^3, unknown concentration, or firefighting	Full-facepiece, self-contained breathing apparatus operated in positive-pressure mode.

* Full facepiece is required if the lead aerosols cause eye or skin irritation at the use concentrations.

** A high-efficiency filter means a filter that is at least 99.97% efficient against mono-dispersed particles of 0.3 µm (micrometers) in diameter or higher.

Respirator Requirements of 1926.62 (Construction Lead Standard)

Airborne Concentration or Condition of Use	Required Respirator
≤ 0.5 mg/m^3 (milligrams per cubic meter)	**(1)** Half-mask* air-purifying respirator with high-efficiency filters**; or **(2)** Half-mask* supplied-air respirator operated in demand (negative pressure) mode.
≤ 1.25 mg/m^3	**(1)** Loose-fitting hood or helmet powered air-purifying respirator with high-efficiency filters**; or **(2)** Hood or helmet supplied-air respirator operated in a continuous-flow mode (e.g., Type CE abrasive blasting respirators [see page 360] operated in a continuous-flow mode).
≤ 2.5 mg/m^3	**(1)** Full-facepiece air-purifying respirator with high-efficiency filters**; **(2)** Tight-fitting powered air-purifying respirator with high-efficiency filters**; **(3)** Full-facepiece supplied-air respirator operated in demand mode; **(4)** Half-mask* or full-facepiece supplied-air respirator operated in a continuous-flow mode; or **(5)** Full-facepiece self-contained breathing apparatus operated in demand mode.
≤ 50 mg/m^3	Half-mask* supplied-air respirator operated in pressure-demand or other positive-pressure mode.
≤ 100 mg/m^3	Full-facepiece supplied-air respirator operated in pressure-demand or other positive-pressure mode (e.g., Type CE abrasive blasting respirators [see page 360] operated in a continuous-flow mode).
> 100 mg/m^3, unknown concentration, or firefighting	Full-facepiece self-contained breathing apparatus in pressure-demand or other positive-pressure mode.

* Full facepiece is required if the lead aerosols cause eye or skin irritation at the use concentrations.

** A high-efficiency filter means a filter that is at least 99.97% efficient against mono-dispersed particles of 0.3 µm (micrometers) in diameter or higher.

Methylene chloride (1910.1052)

Airborne Concentration or Condition of Use	Required Respirator
≤ 625 ppm (parts per million) (25 X PEL)	Continuous-flow supplied-air respirator, hood or helmet.
≤ 1250 ppm (50 X PEL)	**(1)** Full-facepiece supplied-air respirator operated in negative-pressure (demand) mode; or **(2)** Full-facepiece self-contained breathing apparatus operated in negative-pressure (demand) mode.
≤ 5,000 ppm (200 X PEL)	**(1)** Continuous-flow supplied-air respirator, full-facepiece; **(2)** Pressure-demand supplied-air respirator, full-facepiece; or **(3)** Positive-pressure full-facepiece self-contained breathing apparatus.
> 5,000 ppm or unknown concentration	**(1)** Positive-pressure full-facepiece self-contained breathing apparatus; or **(2)** Full-facepiece pressure-demand supplied-air respirator with an auxiliary self-contained air supply.
Firefighting	Positive-pressure full-facepiece self-contained breathing apparatus.
Emergency escape	**(1)** Any continuous-flow or pressure-demand self-contained breathing apparatus; or **(2)** Gas mask with organic vapor canister.

4,4'-Methylenedianiline (1910.1050 & 1926.60)

Airborne Concentration or Condition of Use	Required Respirator
≤ 10 X PEL	Half-mask respirator with high-efficiency* cartridge**.
≤ 50 X PEL	Full-facepiece respirator with high-efficiency* cartridge or canister**.
≤ 1,000 X PEL	Full-facepiece powered air-purifying respirator with high-efficiency* cartridge**.
> 1,000 X PEL or unknown concentration	**(1)** Self-contained breathing apparatus with full facepiece in positive-pressure mode; or **(2)** Full-facepiece positive-pressure demand supplied-air respirator with auxiliary self-contained air supply.
Escape	**(1)** Any full-facepiece air-purifying respirator with high-efficiency* cartridges**; or **(2)** Any positive-pressure or continuous-flow self-contained breathing apparatus with full facepiece or hood.
Firefighting	Full-facepiece self-contained breathing apparatus in positive-pressure demand mode.

* A high-efficiency filter means a filter that is at least 99.97% efficient against mono-dispersed particles of 0.3 µm (micrometers) in diameter or higher.
** Combination High-Efficiency/Organic Vapor Cartridges shall be used whenever Methylenedianiline is in liquid form or a process requiring heat is used.

OSHA Respirator Requirements for Selected Chemicals

Vinyl Chloride (1910.1017)

Airborne Concentration or Condition of Use	Required Respirator
≤ 10 ppm (parts per million)	**(1)** Combination Type C supplied-air respirator [see below], demand type, with half facepiece, and auxiliary self-contained air supply; **(2)** Type C supplied-air respirator [see below], demand type, with half facepiece; or **(3)** Any chemical cartridge respirator with an organic vapor cartridge which provides a service life of at least 1 hour for concentrations of vinyl chloride up to 10 ppm.
≤ 25 ppm	**(1)** Powered air-purifying respirator with hood, helmet, full or half facepiece, and a canister which provides a service life of at least 4 hours for concentrations of vinyl chloride up to 25 ppm; or **(2)** Gas mask with front- or back-mounted canister which provides a service life of at least 4 hours for concentrations of vinyl chloride up to 25 ppm.
≤ 100 ppm	**(1)** Combination Type C supplied-air respirator [see below], demand type, with full facepiece, and auxiliary self-contained air supply; or **(2)** Open-circuit self-contained breathing apparatus with full facepiece, in demand mode; or **(3)** Type C supplied-air respirator [see below], demand type, with full facepiece.
≤ 1,000 ppm	Type C supplied-air respirator [see below], continuous-flow type, with full or half facepiece, helmet, or hood.
≤ 3,600 ppm	**(1)** Combination Type C supplied-air respirator [see below], pressure demand type, with full or half facepiece, and auxiliary self-contained air supply; or **(2)** Combination type continuous-flow supplied-air respirator with full or half facepiece and auxiliary self-contained air supply.
> 3,600 ppm or unknown concentration	Open-circuit self-contained breathing apparatus, pressure-demand type, with full facepiece.

Definitions for Type C and Type CE Respirators

The definitions below were obtained from the NIOSH Certified Equipment List, which is available on the NIOSH Web site (http://www.cdc.gov/niosh/npptl/topics/respirators/cel).

Type C Respirator: An airline respirator, for entry into and escape from atmospheres not immediately dangerous to life or health, which consists of a source of respirable breathing air, a hose, a detachable coupling, a control valve, orifice, a demand valve or pressure demand valve, and arrangement for attaching the hose to the wearer and a facepiece, hood, or helmet.

Type CE Respirator: A Type C supplied-air respirator equipped with additional devices designed to protect the wearer's head and neck against impact and abrasion from rebounding abrasive material, and with shielding material such as plastic, glass, woven wire, sheet metal, or other suitable material to protect the window(s) of facepieces, hoods, and helmets which do not unduly interfere with the wearer's vision and permit easy access to the external surface of such window(s) for cleaning.

MISCELLANEOUS NOTES

Benzene

The final OSHA Benzene standard in 1910.1028 applies to all occupational exposures to benzene except some subsegments of industry where exposures are consistently under the action level (i.e., distribution and sales of fuels, sealed containers and pipelines, coke production, oil and gas drilling and production, natural gas processing, and the percentage exclusion for liquid mixtures); for the excepted subsegments, the benzene limits in Table Z-2 apply (i.e., an 8-hour TWA of 10 ppm, an acceptable ceiling of 25 ppm, and 50 ppm for a maximum duration of 10 minutes as an acceptable maximum peak above the acceptable ceiling).

Octachloronaphthalene
Pentachloronaphthalene
Tetrachloronaphthalene
Trichloronaphthalene

IDLH values for these four chloronaphthalene compounds are unknown. The *Documentation for Immediately Dangerous to Life or Health Concentrations* (NTIS Publication Number PB-94-195047) identified "Effective" IDLH values, based on analogy with other chloronaphthalenes and the then-effective *NIOSH Respirator Decision Logic* (DHHS [NIOSH] Publication No. 87-108; http://www.cdc.gov/niosh/docs/87-108). These values for respirator recommendations were determined by multiplying the NIOSH REL or OSHA PEL by an assigned protection factor of 10. This assigned protection factor was used during the Standards Completion Program for deciding when the "most protective" respirators should be used for these four chemicals. Listed below are the "Effective" IDLH values that were determined using 10 times the REL or PEL for each chemical. For more information please consult the *IDLH Documentation* on the NIOSH Web site (http://www.cdc.gov/niosh/idlh/idlh-1.html).

Chemical	NIOSH REL/OSHA PEL	"Effective" IDLH (10 X REL/PEL)
Octachloronaphthalene	TWA 0.1 mg/m^3 *	1 mg/m^3
Pentachloronaphthalene	TWA 0.5 mg/m^3	5 mg/m^3
Tetrachloronaphthalene	TWA 5 mg/m^3	50 mg/m^3
Trichloronaphthalene	TWA 2 mg/m^3	20 mg/m^3

* NIOSH also recommends a STEL of 0.3 mg/m^3 for octachloronaphthalene; the TWA of 0.1 mg/m^3 was used to calculate the "Effective" IDLH of 1 mg/m^3.

Sulfuryl fluoride	**TWA** 5 ppm (20 mg/m^3), **ST** 10 ppm (40 mg/m^3)
Sulprofos	**TWA** 1 mg/m^3
Talc	**TWA** 2 mg/m^3 (resp)
Temephos	**TWA** 10 mg/m^3 (total), **TWA** 5 mg/m^3 (resp)
Terphenyl (o-, m-, p-isomers)	**C** 5 mg/m^3 (0.5 ppm)
1,1,2,2-Tetrachloroethane	**TWA** 1 ppm (7 mg/m^3) [skin]
Tetrachloroethylene	**TWA** 25 ppm (170 mg/m^3)
Tetrahydrofuran	**TWA** 200 ppm (590 mg/m^3), **ST** 250 ppm (735 mg/m^3)
Tetrasodium pyrophosphate	**TWA** 5 mg/m^3
4,4'-Thiobis(6-tert-butyl-m-cresol)	**TWA** 10 mg/m^3 (total), **TWA** 5 mg/m^3 (resp)
Thioglycolic acid	**TWA** 1 ppm (4 mg/m^3) [skin]
Thionyl chloride	**C** 1 ppm (5 mg/m^3)
Tin (organic compounds, as Sn)	**TWA** 0.1 mg/m^3 [skin]
Tin(II) oxide (as Sn)	**TWA** 2 mg/m^3
Tin(IV) oxide (as Sn)	**TWA** 2 mg/m^3
Titanium dioxide	**TWA** 10 mg/m^3
Toluene	**TWA** 100 ppm (375 mg/m^3), **ST** 150 ppm (560 mg/m^3)
Toluene-2,4-diisocyanate	**TWA** 0.005 ppm (0.04 mg/m^3), **ST** 0.02 ppm (0.15 mg/m^3)
m-Toluidine	**TWA** 2 ppm (9 mg/m^3) [skin]
p-Toluidine	**TWA** 2 ppm (9 mg/m^3) [skin]
Tributyl phosphate	**TWA** 0.2 ppm (2.5 mg/m^3)
Trichloroacetic acid	**TWA** 1 ppm (7 mg/m^3)
1,2,4-Trichlorobenzene	**C** 5 ppm (40 mg/m^3)
Trichloroethylene	**TWA** 50 ppm (270 mg/m^3), **ST** 200 ppm (1080 mg/m^3)
1,2,3-Trichloropropane	**TWA** 10 ppm (60 mg/m^3)
1,1,2-Trichloro-1,2,2-trifluoroethane	**TWA** 1000 ppm (7600 mg/m^3) **ST** 1250 ppm (9500 mg/m^3)
Triethylamine	**TWA** 10 ppm (40 mg/m^3), **ST** 15 ppm (60 mg/m^3)
Trimellitic anhydride	**TWA** 0.005 ppm (0.04 mg/m^3)
Trimethylamine	**TWA** 10 ppm (24 mg/m^3), **ST** 15 ppm (36 mg/m^3)
1,2,3-Trimethylbenzene	**TWA** 25 ppm (125 mg/m^3)
1,2,4-Trimethylbenzene	**TWA** 25 ppm (125 mg/m^3)
1,3,5-Trimethylbenzene	**TWA** 25 ppm (125 mg/m^3)

VACATED 1989 OSHA PELs

(See pages xi and xii for an explanation of the vacated 1989 OSHA PELs.)

Chemical	Vacated 1989 OSHA PEL
Trimethyl phosphite	**TWA** 2 ppm (10 mg/m^3)
2,4,6-Trinitrotoluene	**TWA** 0.5 mg/m^3 [skin]
Triorthocresyl phosphate	**TWA** 0.1 mg/m^3 [skin]
Triphenylamine	**TWA** 5 mg/m^3
Tungsten (insoluble compounds, as W)	**TWA** 5 mg/m^3, **ST** 10 mg/m^3
Tungsten (soluble compounds, as W)	**TWA** 1 mg/m^3, **ST** 3 mg/m^3
Tungsten carbide (cemented)	**TWA** 5 mg/m^3 (as W), **ST** 10 mg/m^3 (as W), **TWA** 0.05 mg/m^3 (as Co), **TWA** 1 mg/m^3 (as Ni)
Uranium (insoluble compounds, as U)	**TWA** 0.2 mg/m^3, **ST** 0.6 mg/m^3
n-Valeraldehyde	**TWA** 50 ppm (175 mg/m^3)
Vanadium dust	**TWA** 0.05 mg V_2O_5/m^3 (resp)
Vanadium fume	**C** 0.05 mg V_2O_5/m^3
Vinyl acetate	**TWA** 10 ppm (30 mg/m^3), **ST** 20 ppm (60 mg/m^3)
Vinyl bromide	**TWA** 5 ppm (20 mg/m^3)
Vinyl cyclohexene dioxide	**TWA** 10 ppm (60 mg/m^3) [skin]
Vinylidene chloride	**TWA** 1 ppm (4 mg/m^3)
VM & P Naphtha	**TWA** 1350 mg/m^3 (300 ppm), **ST** 1800 mg/m^3 (400 ppm)
Welding fumes	**TWA** 5 mg/m^3
Wood dust (all wood dusts except Western red cedar)	**TWA** 5 mg/m^3, **ST** 10 mg/m^3
Wood dust (Western red cedar)	**TWA** 2.5 mg/m^3
Xylene (o-, m-, p-isomers)	**TWA** 100 ppm (435 mg/m^3), **ST** 150 ppm (655 mg/m^3)
m-Xylene α,α'-diamine	**C** 0.1 mg/m^3 [skin]
Xylidine	**TWA** 2 ppm (10 mg/m^3) [skin]
Zinc chloride fume	**TWA** 1 mg/m^3, **ST** 2 mg/m^3
Zinc oxide	**TWA** 5 mg/m^3 (fume), **ST** 10 mg/m^3 (fume), **TWA** 10 mg/m^3 (total dust), **TWA** 5 mg/m^3 (resp dust)
Zinc stearate	**TWA** 10 mg/m^3 (total), **TWA** 5 mg/m^3 (resp)
Zirconium compounds (as Zr)	**TWA** 5 mg/m^3, **ST** 10 mg/m^3
